manager control panel applet Open the
Control Panel If using category view open

System and Security Open

Configuration Manager **Verify**

connectivity On the general tab there
should be some basic information present.

Assigned management point

sccmmp2.campus.cu.clemson.edu

Client certificate

self-signed

Connection type

currently internet

Refresh Computer policy

This will cause the computer to download the latest policy from the server (this is done automatically every 60 minutes if connected to campus).

- [Open Configuration Manager Control Panel Applet](#)
- Go to the **Actions** tab
- select **Machine Policy Retrieval & Evaluation Cycle**
- click **Run Now** button
- Wait a few minutes
- updates should automatically propagate to software center

Application Deployment Evaluation

If you have made changes to the system configuration outside of CCIT Software Center (ex. uninstalled software from programs and features) and now need to install software that is listed as installed.Â This process will recheck the system for the software and change the status accordingly (done automatically every 5 days).

- [Open Configuration Manager Control Panel Applet](#)
- Go to the **Actions** tab
- Select **Application Deployment Evaluation Cycle**
- Click **Run Now** button
- Wait a few minutes
- updates should automatically propagate to software center

Software Updates Deployment Evaluation Cycle

Evaluates if current known updates from the update scan cycle are still installed or have been installed outside of SCCM. This process runs every 7 days to provide continued compliance.

- [Open Configuration Manager Control Panel Applet](#)
- Go to the **Actions** tab
- Select **Software Deployment Evaluation Cycle**
- Click **Run Now** button
- Wait a few minutes
- updates should automatically propagate to software center

Software Updates Scan Cycle

Runs a local update scan for update compliance. This process is automatically ran when a machine policy refresh contains updates to deploy.

- [Open Configuration Manager Control Panel Applet](#)
- Go to the **Actions** tab
- Select **Software Updates Scan Cycle**
- Click **Run Now** button
- Wait a few minutes
- updates should automatically propagate to software center

Clear Cache

Some packages fail to download and do not automatically refresh the cache on a retry. Or you may just need to free up hard drive space.

- [Open Configuration Manager Control Panel Applet](#)
- Go to the **Cache** tab
- Click **Configure Settings**
- Click **Delete Files**
- Click **Yes**
- Wait a few seconds retry download
