

HOW TO: Connect to eduroam using Windows 10

480 Ryan Real April 19, 2023 [Network, Phones and Cable](#)

If the computer has previously been connected to the clemsonguest network, it must be forgotten before the computer can be connected to eduroam. [Click here for instructions on how to forget a wireless network on a Windows 10 computer.](#)

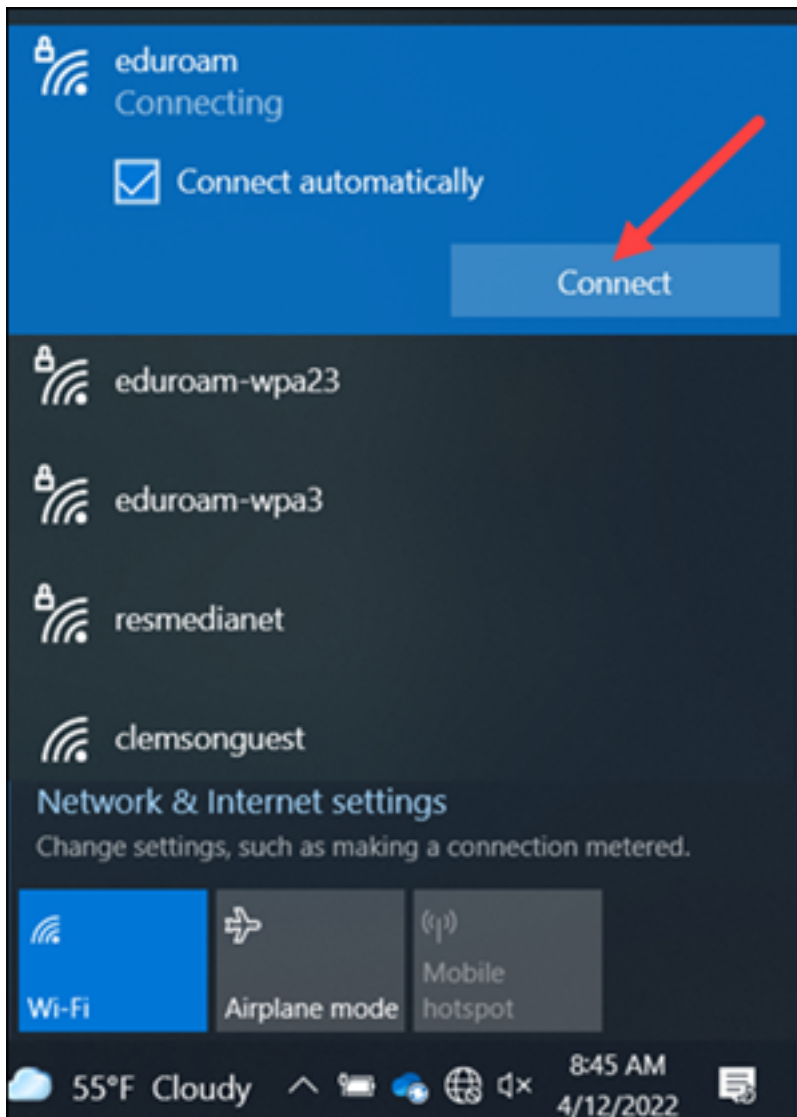

Here is a video on connecting to eduroam at Clemson on Windows 10:

Here are the steps:

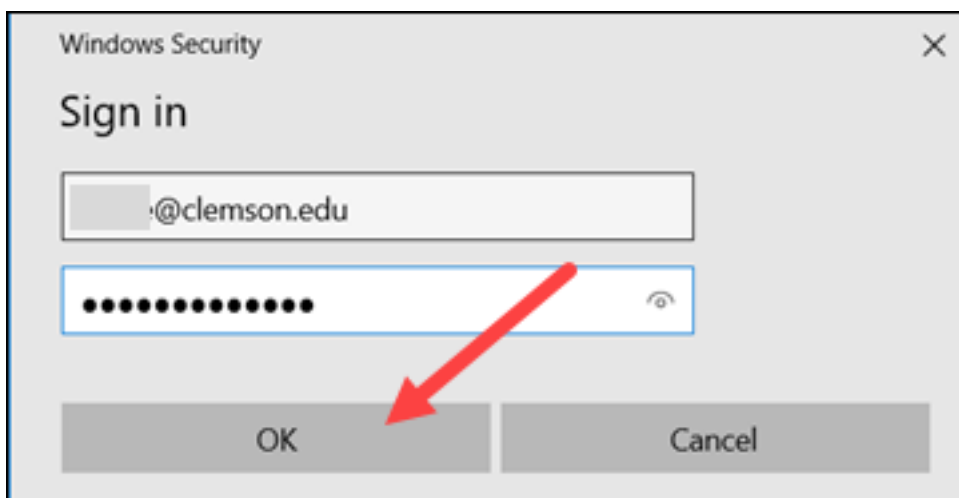

1. On the Windows taskbar click on the **Network** icon.

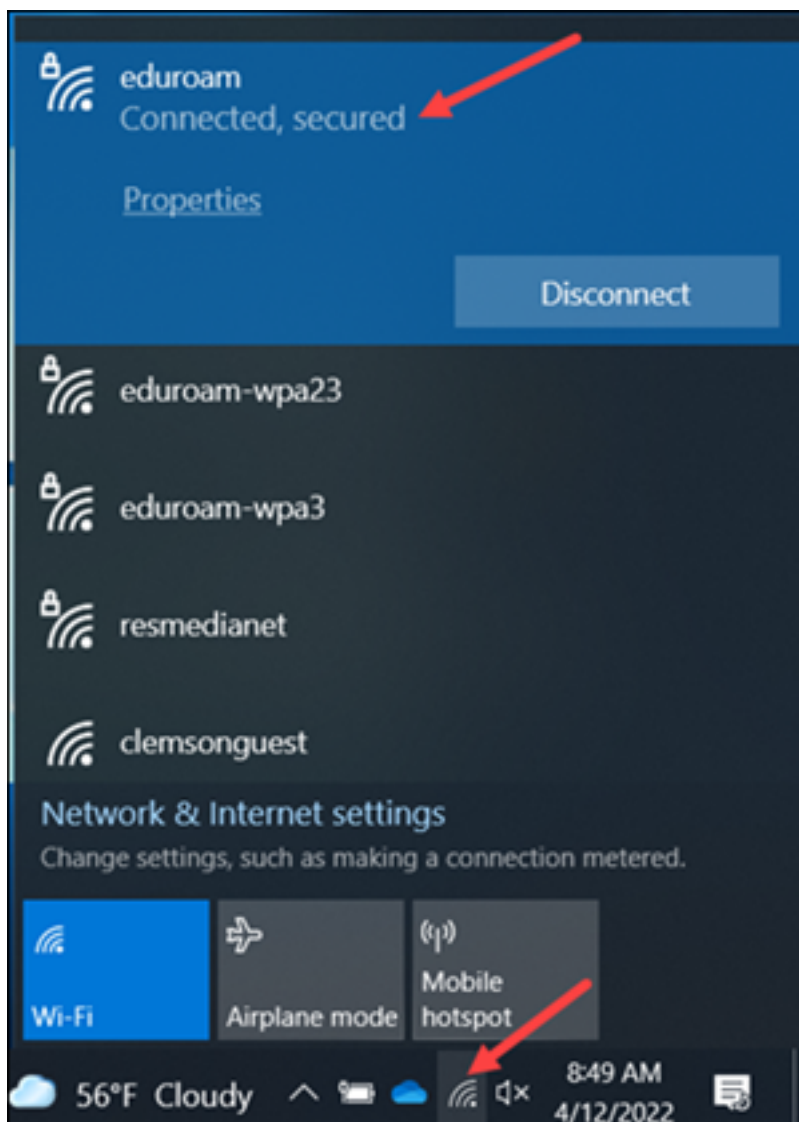

2. The list of wi-fi networks will appear on the right side of the screen.
3. Select the **eduroam** network. Then click **Connect**.

4. Enter your **username@clemson.edu** and your Clemson **password**. (You MUST include '@clemson.edu' after your user name for eduroam to connect - do not include a "g".) Then click **OK**.

5. Now you will see that you are connected to eduroam and you will see the wi-fi icon in the taskbar.

If you have more questions on this, email ITHELP@clemson.edu or call 864-656-3494.
