

Amazon Echo

Article Number: 486 | Last Updated: Mon, Jan 8, 2018 at 6:41 AM

Connection Instructions Applicable to the Amazon Echo, Echo Tap, and Echo Dot. Download the **Amazon Alexa app** to your smartphone or computer and sign in with your Amazon account. Plug in the Echo using the included power adapter. Connect to the wireless network broadcasted by your echo. ***Broadcasting a network from your Echo is only allowed during setup. Broadcasting a network from your Echo after setup is a violation of the Computer Network Usage and Security Policy.*** Record the MAC address of the Echo, located at the bottom of the first screen in the Alexa app. On a device already connected to the internet, navigate to <http://netreg.clemson.edu>. Enter your Clemson credentials if prompted. Click the 'Add Registration' link on the left. Enter the MAC address from step 4 in the format XX:XX:XX:XX:XX:XX. Give the device a description like 'Amazon Echo'. Read the acceptable user policy and click the 'I Accept' button. Select **resmedianet** from the list of wireless networks. Enter **tigerpaw** for the WPA2 Encryption Key when prompted by the Alex app. If presented with a screen asking to perform an action, click continue. Connect your phone to **resmedianet** to complete the setup process.
