Accessing your home directory using Clemson Home Directory tool on a Mac

682 Laurie Sherrod February 20, 2019 [Web Systems, Servers, Hosting & Data Storage](), [Working with Files]()

Home Directory space (U: drive) is provided for all faculty, staff and students with a valid Clemson User ID. Home Directory space is used by an individual to store files on campus. One way to access it on a Mac is to use the Clemson Home Directory tool.

- Open a web browser and go to https://ccit.clemson.edu/mac.
- Click on **Download Installer** in the upper right hand side of the screen, and then click **Continue**, **Continue**, **Continue**
- You will see a list of available software to install. De-select everything on the list except under Miscellaneous - leave **Clemson Home Directory** selected.
- Click on **Continue**, **Install**.
- You may be asked for your Mac password, then click **Install Software**.
- You may need to restart your computer.
- There will now be an icon on the desktop that says **Clemson Home Directory**. Double click on that icon.
- You will see a message "You are attempting to connect to the server home.clemson.edu". Click **Connect**.
- Now it will ask for your Clemson user name and password. Once you click Connect, your U: drive space will be mapped and you will see it under Finder.
