

Convert Video Files to Another Format

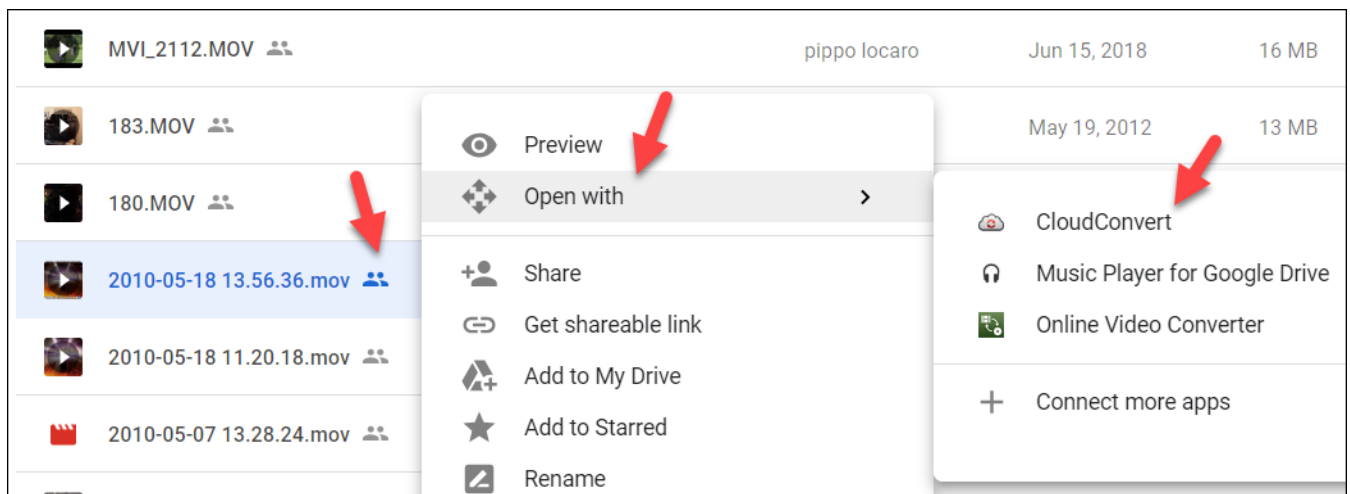

724 Laurie Sherrod June 21, 2023 [Google Apps](#)

One way to convert video files from one format to another is to use the CloudConvert Google App. Here are the steps.

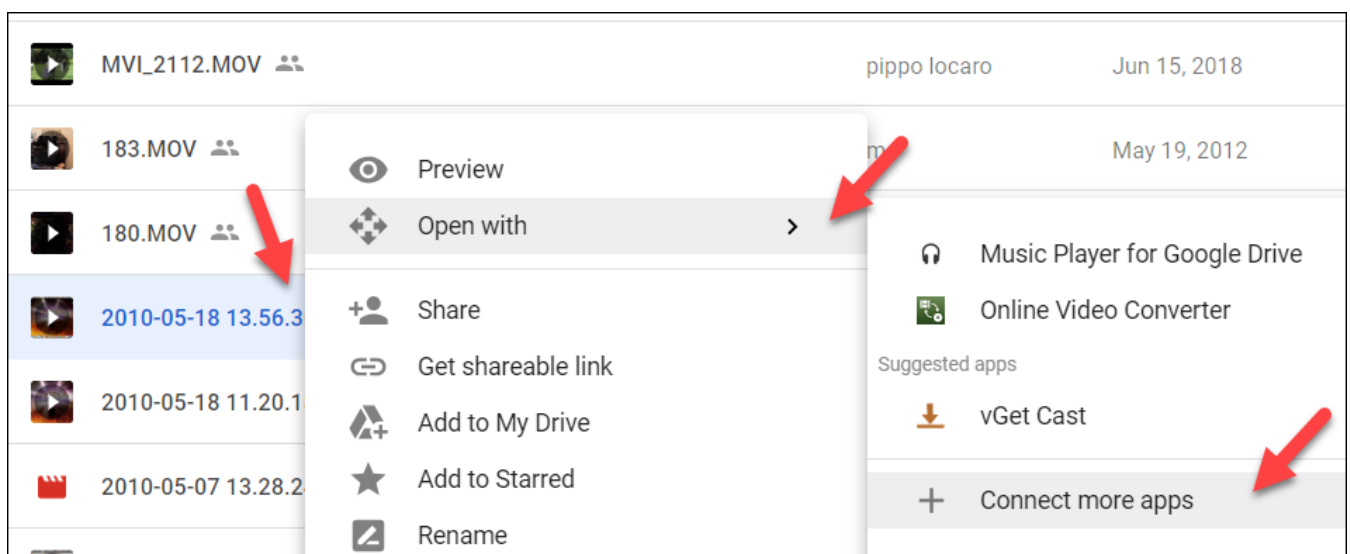

Upload a file to Google Drive.

Right click on it, and hover over **Open with**.

If you see **CloudConvert**, select it.

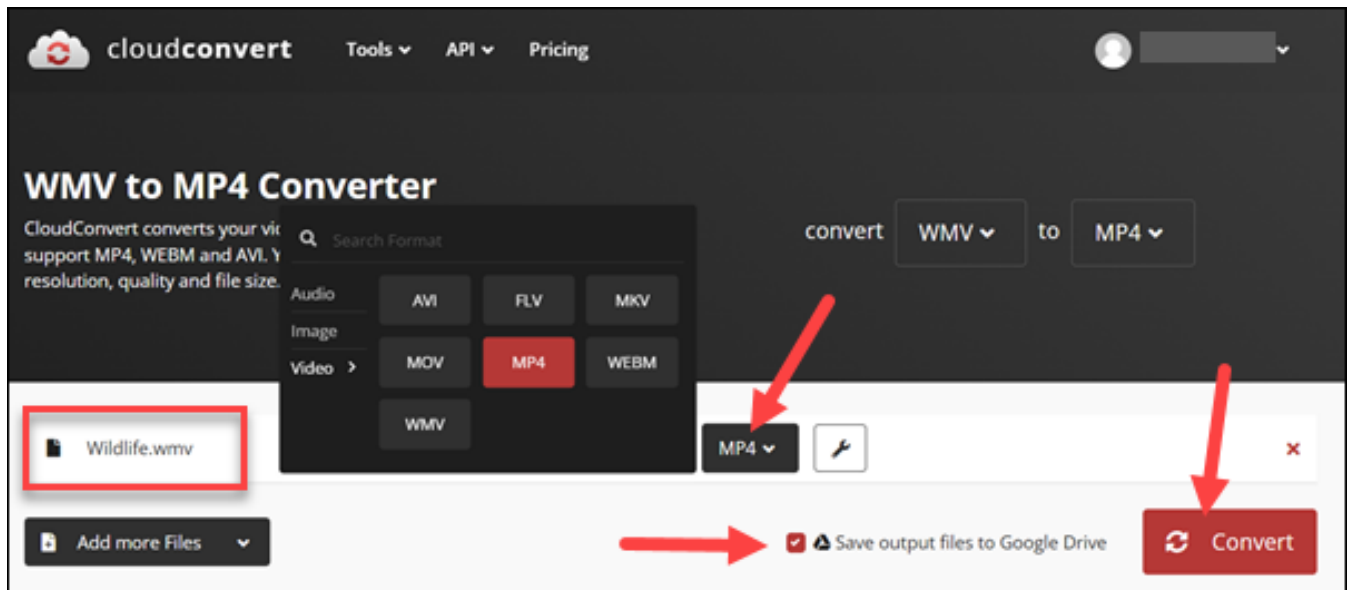

If you don't see it as an option, click on **Connect more apps**. From there search for CloudConnect and install it.

Now go back to your list of files, right-click on the file, hover over **Open with**, and select **CloudConvert**.

You will see this:

It will have selected the file you clicked on, you can select the output file format (here we have chosen .mp4). Click **Save output files to Google Drive**, then click **Convert**. It may take a while depending on the size of the file. When it's finished, the file will be in your Google Drive or you can download it.
