**To adjust Safari's security preferences to allow Flash Content in Adobe Connect, please follow the steps below:**

When you use the Adobe Connect Add-in on Mac OS X 10.9, 10.8, or 10.7 with Safari 6.1 or 7, you may see the following message: "You don't have the Adobe Connect domain name in the Safari Flash Player security settings." The new **Adobe Connect 9.0.2** add-in should resolve this issue. You can install the new add-in in the following circumstances: You try to start or join 9.0.2 meeting for first time and have older version of the Add-in installed. You start screen sharing, application sharing, or share PowerPoint (PPTX format) files, and don't have the latest version of the Add-in installed.

**For Mac OS:** To download the Mac Add-in:

<http://helpx.adobe.com/adobe-connect/kb/connect-902-add-in.html> Save the file when prompted; by default, it's saved in the Downloads folder. Open the Downloads folder and open `ac_addin_mac_250.z` to extract the package (the package name is `isadobeconnectaddin-installer.pkg`). Open `adobeconnectaddin-installer.pkg` to launch the installer. Follow the installer prompts to install the Add-In.
